

Abstract

The Radiator Debris Guard was invented to keep bugs and debris from damaging the radiator. The guard will also prolong the life of the radiator and keep it cosmetically attractive. Made of aluminum, it will be lightweight, will not rust, and will not overheat the radiator. They will use the existing radiator brackets, so car owners will not have to drill extra holes to make it fit the vehicle they own. Each radiator guard will be fit to the dimensions of the specific car. The guard is easily removed for cleaning and for car shows. Each guard will be made of heavy-duty aluminum screening material for longer life.
